CONDITIONS OF SALE

The prices in this catalog cancel all previous prices and are subject to change without notice. All orders for stock are subject to prior sale.

GUARANTEE

This is governed by the Pennsylvania Nurserymen's Association Uniform Retail Replacement Agreement which is as follows: "Provided account is paid within thirty days and plants receive reasonable care, we will replace at one-half price of the plants, plus cost of planting, plants planted in the spring that fail to survive the following summer, or if planted in the fall, fail to leaf out the following spring."

Should we not have the same plants in stock, we reserve the right to give credit for an amount equal to one-half the cost of the plants lost, in other plants of your selection.

DELIVERY CHARGE

Certain items in this catalog include all delivery costs prepaid to your home. These items are Mushroom Manure, Scott's Lawn Seed, Turf Builder, Eisler's Humus, Lawn Mowers, Garden Tractors, Strawberry Plants, etc. Prices on general Nursery Stock does not include delivery, except on large truck load orders to be delivered within fifty miles.

GUARANTEE OF GENUINENESS

All plant materials are warranted by us to be true to name and in a healthy condition. If any stock proves untrue to variety name or to our description under which sold, we will, upon proper evidence, replace the stock at no cost or refund the full purchase price. We shall in no case be responsible for any sum greater than the original purchase price.

TERMS

To those having established credit, we are pleased to extend our regular thirty-day terms. Orders for C.O.D. shipments must be accompanied by at least one-third of the amount of the order.

We sell Tractors, Nursery Stock, Power Mowers, and Landscape Jobs on a twelve (12) monthly payment plan. If interested, please ask for details.

EVERGREEN SHRUBS and AZALEAS

(RHODODENDRONS)

We take pride in our list of hardy Azaleas and Rhododendrons which we have growing in our Prospect, Butler County Nurseries. We have the best selection of hardy varieties to be found within hundreds of miles in any direction. A great many have been imported directly from Holland and have been acclimated to our winters. These are truly aristocrats. We do not attempt to grow varieties that are not perfectly hardy with us.

Some Views of a Small Part of the Nursery Grown, Winter Hardy Plants
at the EISLER NURSERIES

Our nurseries located 7 miles west of Butler, on Route 422, are one of the largest in the state and we cordially invite you to visit them. You can see how we start the tiny little cuttings in our own propagation house and then grow them into mature plants to supply our customers.

We grow over 500 varieties of trees and shrubs all of which must be perfectly hardy to endure our Western Pennsylvania winters. You may come to the nurseries any day except Sunday and select the material that you like and have it dug fresh for you, or if you can't come any other day in the week, you are invited to stroll through them on Sunday for we always welcome visitors.

The quality of the stock furnished by us is far superior to that sold by so many brokers, who call themselves Nur-

series, and who rely upon supplying cheap southern grown stock. The cost of growing plants in this climate with our short summer is far more than that of the south and in many cases we simply can't compete when price alone is considered, but we take pride in growing and selling quality plants as has been done by our family since 1870.

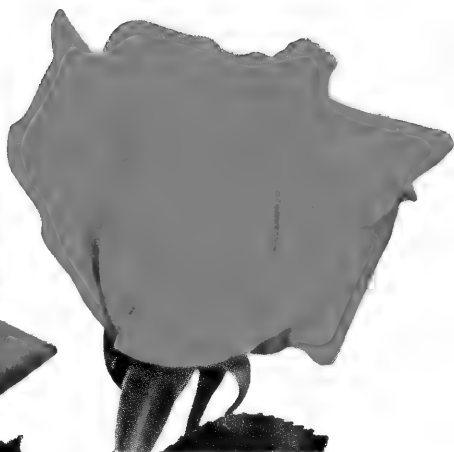

We maintain a landscape service and will be happy to plant your property for you. We are not landscape architects but recommend their services to you. If you wish detailed plans for large homes and estates, it is money well spent when you secure the services of a professional landscape architect. If our years of practical experience is of assistance to you, we are always happy to give our advice free, for we employ some of the best horticulturists in this locality.

LARGE SPECIMEN TREES

These trees are all grown in our own nursery and may be selected and marked by the home owner before moving. The measurement is taken at a point six inches above the ground and is the diameter of the trunk.

Purchasing of these trees gives the home owner a ten to twenty year saving of time. If you are middle aged, you may have nice shade trees at once and not wait until you are old to enjoy the trees.

Prices quoted include the furnishing and planting of the tree complete with a large ball of earth as well as a replacement guarantee. Prices are subject to deviation dependent upon conditions and distance from nursery. On orders for several trees to the same point, we can often give a discount. If holes are dug by owner and sub-soil removed it will also cut costs.

Soil For Planting

Broadleaf Evergreens such as Rhododendrons, Ilex, and Azaleas thrive in a well drained acid soil. We prefer to mix one part of Eisler's Humus, peat moss, or leaf mold with two parts of good top-soil for planting. Water well and mulch with humus, or peat moss. Do not use lime or fresh sawdust around plants. Roses, flowering shrubs, fruit trees and shade trees prefer a mixture containing about one part of spent mushroom manure, rotted manure, or compost mixed with three parts of top-soil as a planting mixture. A little bonemeal mixed in will also be helpful, but do not use strong commercial fertilizers next to the roots. Make sure the hole, or planting bed drains well before planting.

CHRYSANTHEMUMS

We propagate and grow thousands of hardy Chrysanthemums both in the Cushion type and the taller Chrysanthemum varieties. A large plot of ground across from our Garden Shop - seven miles West of Butler on Route 422 - is being devoted to the raising of some of the finest "Mums" in America. We have been selected by the United States Department of Agriculture to grow and test the newer selections that they produce at the famous Beltsville, Maryland experimental station long before they are named, or released to the public. If you like to see a beautiful display of thousands of flowers all in bloom at one time, we invite you to see our "Mums" in bloom in September and October of each year. You may make your selections and have them dug fresh for you to take home to your garden. If you just wish to browse around, or to take colored pictures of them, you may do so at any time.

PRUNING

We recommend that all bare root shrubbery and trees should be pruned back about one third immediately when they are planted. This gives the roots a chance to grow before the top makes too much growth and will give you a much better plant the second year and every year after. If you need pruners, we have a large assortment at our new Garden Shop on Route 422, seven miles West of Butler.

HUMUS

EISLER'S HUMUS

This is a fine grade of Peat Humus produced in Mercer County. It is a splendid conditioner and acts as a sponge in retaining moisture in the soil. Use it as a top dressing or mix it with your soil in preparing a seed bed. It is a splendid mulch for Rhododendrons, Ilex, Azaleas and Laurel. It lacks the fertilizing qualities of Mushroom Manure but is higher in organic content.

SPRING PLANTING SEASON

Spring is commonly considered the only planting season by many, but not so with us. We grow roses, flowering shrubs, fruit trees and shade trees in containers for those who were disappointed with shipped-in Nursery Stock, for those whose home was not ready for planting, or for those who did not have time for Spring planting. These may be planted at any time of the year with no risk on your part, for we guarantee them to grow for you.

SPENT MUSHROOM MANURE

Spent Mushroom Manure is real stable manure to which has been added 20% of rich top soil and then used to grow one crop of Mushrooms in the huge limestone caverns at West Winfield in Butler County. The heat of fresh manure is gone, but the organic content and fertility of good barnyard manure is retained.

The high organic content, almost five times that of top soil, is quite valuable in loosening heavy soils and increasing the moisture retention value. It is a long time source of mineral elements which are released gradually through decomposition into the soil.

New studies prove that organic plant foods such as Mushroom Manure are absolutely vital in growing crops for human consumption. They claim that vegetables grown without organic elements are almost valueless in supplying the needs of our body.

A two-inch layer of Spent Mushroom Manure mixed with clay excavation soil will produce a good lasting turf. This makes a much lower cost lawn than the hauling in of some low grade so-called top soil. This has been proven over and over again. It will produce a good lasting turf almost weedless.

For use on a vegetable, or flower garden we recommend from two to four inches spaded into the soil. A generous application will supply your garden with ample plant food for a long time. It loosens the soil, retains moisture and promotes growth. For mulching, or placing around any established plants, we recommend from one to two inches. For roses, it should be placed down in the bed on planting and then use some to mulch them every fall for winter protection. As a top-dressing for lawn either in the fall or winter, we recommend from $\frac{1}{4}$ to $\frac{1}{2}$ inch. It is also used by many gardeners to cover newly seeded lawns to keep them from drying out after seeding.

Spent Mushroom Manure lacks the filth, odor and disease spread in ordinary stable manure for it is sterilized before entering the Mushroom growing plant. This process also kills nearly all weed seeds found in ordinary barnyard manures.

The amount required to cover a given area is as follows:

one cubic yard will cover as follows

81 square feet to a thickness of 4 inches
108 square feet to a thickness of 3 inches
162 square feet to a thickness of 2 inches
324 square feet to a thickness of 1 inch
648 square feet to a thickness of $\frac{1}{2}$ inch
1296 square feet to a thickness of $\frac{1}{4}$ inch

GENERAL INFORMATION

Following is a list of materials and procedures to be used in new lawn construction, new planting operations and maintenance of both throughout the year. This information must be considered as a guide to be followed under normal conditions only, since certain situations will require special consideration.

NEW LAWN CONSTRUCTION:

- * TOPSOIL - Minimum depth - 4" — 12 1/2 cu. yd. per 1,000 sq. ft.
Best results with - 6" — 20 cu. yd. per 1,000 sq. ft.
- * MUSHROOM MANURE - 2 cubic yards per 1,000 sq. ft. Mix into (4) four inches of topsoil.
- * AGRICULTURAL LIME - 60 lb. per 1,000 sq. ft. Mix into top (4) four inches of topsoil.
- * FERTILIZER - Use either Growell or Turf Builder.
- * LEAD ARSENATE - Apply with the Fertilizer at rate of 10 lbs. per 1,000 sq. ft.
- * GRASS SEED - In full sun, use O. M. Scott's Regular at rate of 5 lbs. per 1,000 sq. ft.; in shaded areas, use O. M. Scott's Special mix at same rate as above.
- * Do not distribute seed on the same day that fertilizer is applied.

LAWN MAINTENANCE:

- * Set your lawn mower to cut grass at least 1 1/2 to 2 in. long.
- * Before mowing, rake off the leaves as they cut down light, water and air from the grass.
- * Always weed before mowing. Dandelions develop stronger root systems after having their tops cut off.
- * Roll new lawns the day before the first mowing.
- * Apply complete fertilizer in early Spring and early Fall.
- * Use Soil Testing Kit to determine lime requirements.
- * Top-dress lawn in late Fall with 1/4" of Mushroom Manure to build up organic content of soil. One cubic yard will cover 1296 sq. ft. to a depth of 1/4".
- * Water lawns to a depth of at least three inches during dry season or do not water at all.
- * Control Crab Grass by use of Scutl; applications starting in July.

TREE AND SHRUB MAINTENANCE:

- * Apply a complete fertilizer to large trees at the rate of 3 lbs. per inch of trunk diameter. Application to be made through holes made by use of iron bar to a depth of 18" with diameter of 2" and located on 3 foot centers under entire spread of tree's branches. Use 1 to 1 1/2 lbs. of fertilizer to the hole.
- * Feed shrubs and foundation plantings by scattering the fertilizer over the bed area and working into soil to a depth of 2 or 3 inches. Use one or two handfulls within the radius of two ft. of each.
- * Plant all trees and shrubs at same depth as they were growing in the Nursery.
- * Mulch all new planting of trees and shrubs with a three to five inch mulch of Mushroom Manure to conserve the natural supply of water in the soil and keep weeds down.
- * Feed your Roses at two to three week intervals during the growing season.
- * Bonemeal is ideal fertilizer for bulbs. Use one tablespoonful of bonemeal in each hole.
- * Never cut off the bulb foliage until it has yellowed or withered.
- * Use Scalecide to eliminate the scale insects during the dormant season. They are found on Lilac, Cotoneaster, trees etc.
- * On Broadleaved Evergreens maintain a soil acidity range of 5.0 to 6.0 ph. using one pound of aluminum sulfate evenly distributed over 20 square feet of surface and watered in well.
- * Broadleaved Evergreens should receive a special acid plant food once a year and never use manure, bonemeal, wood ashes or lime.
